Progress update.... I have slight algae, probably 5 percent of what I had last year...The water is very clear, even with the sky blue dye, I can see 3 to 4 feet. Noticing areas where the microbes have eaten the bottom muck, right down to the sand. FANTASTIC!!!!!!!!!!!! What is the downside of say putting in about 5 to 10 pounds of C-Flo to eat away ALL the bottom muck? You have great products, I couldn't be happier with the results. Use me as a reference anytime.!
