Dear Bart:

I would like to thank you and your company for the efficient and timely installation of one of your aeration systems in the 50 million gallon lagoon at E3 Biofuels-Mead, Nebraska. Within the first 2 weeks, the very aggressive anaerobic activity had stopped and the odors associated with that activity had also been reduced completely. The lagoon, now 30 days with aeration, seems very homogenous with little odor. Our initial tests have showed a decline in the total solids and more so verified by better pump performance. At this point it appears that the system will help drive off some nitrogen and reduce solids as predicted. I plan to do a round of sampling in about 2 weeks and will compare those results with the baseline tests that were done prior to installing the system.

Again thanks for the good work and stay in touch.

Ted Mathews
