Dear Bob,

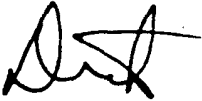

It's been 5 years since we installed your aeration system in our beach area on Rice Lake. I want to give you an update as I see it from my non-technical view point.

You may remember the smelly, weed-infested, muchy beach we started with. This area had been used by cattle as a drinking area for many years. Then the weeds and the decomposing of them made it look and smell like a swamp. The tests you did on the water chemistry revealed that the lake bottom was so concentrated with ammonia that nothing could live there. Things are different now Bob. The smell is hardly noticeable. The lake bottom in the beach area is sandy with the muck receding and the weeds very minimal. The fishing has improved almost unbelievably. The abundance of them and the size too, have brought groups here for fishing camp. Even a 10 1/2# Northern!

As a christian camping and retreat center, we're excited about having a good beach area and good fishing. It is our desire Bob, to initiate your lake restoration program for the entire 83 acre lake. Please pray with us toward this goal.

We're having an exciting summer with many youth groups and families camping with us. I sure hope that you and your family can be with us for the Gospel Music Festival Aug. 16 - 17. This will be our 5th Festival and promises to be a great weekend of fellowship and spiritual encouragement. Thanks again Bob for help with our problem lake!

Your Brother in Christ,

Dick Klawitter/Director
