Brian Kling, President  
Clean-Flo International  
827 Lincoln Avenue, Suite 1  
West Chester, PA 19380

Dear Mr. Kling;

In August 2018, we installed your Laminar Flow Inversion and Oxygenation system at the Ski Run Marina in South Lake Tahoe, CA. As required by State and local permits, we monitored the water and sediment quality prior to system start-up and after the first year of operation. The enclosed report documents the success of the system in reducing the amount of aquatic plants in the marina along with the muck layer that had built up in the Marina since it was last dredged. The data also demonstrates that no adverse effects were noted during operation of the system.

We intend to continue to operate the system for at least the next few years to maintain the improved conditions and potentially, subject to funding availability, expand the system to cover the mouth of the Marina and into the open water of Lake Tahoe.

Sincerely,

A handwritten signature in blue ink, appearing to read "Dan Jack", is written over the word "Sincerely,".

Dan Jack  
Marina Manager
